## Methodology

The Sonde Score is a universal 0–1000 compliance index — think of it like a credit score for accessibility. Each finding is weighted by its impact on human access: a keyboard trap (critical) counts far more than a best-practice suggestion (low). The raw penalty is normalized per page so scores are comparable across sites of any size. A harmonic curve ensures every site gets a meaningful score — no zeros, no false perfection.

$$\text{Score} = \text{round}(1000 \times S / (S + P/N))$$

where S = sensitivity (750), P =  $\Sigma(\text{weight} \times \text{count})$ , N = pages scanned

| TIER     | WEIGHT | EXAMPLES                                |
|----------|--------|-----------------------------------------|
| Critical | 10     | Keyboard traps, missing page language   |
| High     | 3      | Missing alt text, insufficient contrast |
| Medium   | 1      | Heading hierarchy, unclear link purpose |
| Low      | 0.25   | Best-practice suggestions               |

*The Sonde Score is a living standard (vO.1). We're building it in the open because accessibility is too important for closed-door decisions. Your expertise makes it better.*
